Please vote against the National Association of Broadcasters petition #04-160. As a paid subscriber to XM satellite radio, my husband and I are able to enjoy the variety and quality that is not available on public radio stations. We like being able to choose what we want to hear without all the interruptions and not having to wait for traffic and weather reports until the local station decides to air them. There have been many times when we were travelling when instant traffic reports made a huge difference, not to mention weather in other cities on our route. We appreciate the opportunity to express our view and any consideration you may give us.
